2+ years building production business software: CRM, e-commerce, SaaS, and AI-integrated platforms. Fluent in TypeScript and Python across React / Next.js frontends and Node.js / Fastify / Flask backends. Works with REST APIs, PostgreSQL, and LLM integrations. Builds AI agents that act through permission-checked tools with human approval. Works comfortably within existing codebases and architecture. Keeps backend contracts stable. Ships reliable, reviewed, well-tested code. Uses AI-assisted development (Claude Code) under my own design and direction to ship large systems quickly. Self-taught into software from an engineering background.

EXPERIENCE

Full Stack Software Developer, First Global Visa Consultancy, Dhaka (2026 - Present)

- Designed and built the company's all-in-one internal system as its sole developer, covering accounts, HR, sales, marketing and operations.
- Integrated AI features into every part of that system: accounts, HR, sales, marketing and operations.
- Built an AI assistant that handles customer support in production.
- Added AI that analyses internal company data and generates reports for management.
- Built an IP (VoIP) calling system integrated with the company system.
- Built an Android app for staff with custom push notifications.

Freelance Full-Stack Developer, Self-Employed (2024 - Present)

- Build full-stack SaaS and web applications with Next.js, React, Node.js, TypeScript, and PostgreSQL.
- Built and maintain Shishu Mela, a production e-commerce store, for a paying client (see Projects).
- Delivered a Stripe subscription billing system (checkout, webhooks, billing portal, plan-gating).
- Delivered an AI job-match SaaS (auth, dashboard, Gemini API).
- Work end-to-end: architecture, database design, APIs, frontend, and deployment.

SELECTED PROJECTS

vWorker, Multi-Tenant Sales Inbox SaaS with an AI Sales Agent (own product, pre-launch beta)

- Designed and built, as sole author, a multi-tenant SaaS for Bangladeshi online sellers: one inbox for Messenger, Instagram, WhatsApp, website chat and email (pre-launch beta).
- AI sales agent (Claude Haiku via OpenRouter) that replies in Bangla and English, searches products, quotes, creates and updates orders and bookings, and hands off to humans, with a daily spend cap and versioned training.
- Took its first AI-handled order on a real Facebook page; AI evals 36/36; AI reply cost about 1-7 paisa with 80-94% prompt caching.
- About 420 integration tests on real PostgreSQL, with GitHub Actions CI.

Shishu Mela, Children's E-Commerce Store (paid client project, built solo, live since Aug 2026)

- Built solo and maintain a production e-commerce store for a Bangladeshi children's products retailer (books, toys, stationery), live at https://shishumela.site since August 2026.
- Operations admin with role-based JWT/bcrypt login, order workflow with risk flags, courier assignment, bulk actions, CSV export, refunds, invoices, inventory audit trail, customer lifetime value, and an R2 media library.
- About 221 Vitest test cases, Playwright tests and GitHub Actions CI.
- Storefront with catalog, filters, search, product variants, server-priced cart, guest cash-on-delivery checkout, coupons, Bangladesh district/thana addresses with delivery zones, and order tracking.

Repair Marketplace with AI Agents (paid client project, built solo, pre-launch)

- Built solo, for a paying client, an AI-assisted marketplace for home-appliance repair in Bangladesh (late-stage pre-launch, not yet deployed).
- Dispatch engine: 60-second job offers, accept-once with race handling, server-clock deadlines, provider ranking by priority and rating, slot capacity, manual offers and reassignment.
- Three permission-bounded AI agents (support, admin, operations) acting only through permission-checked tools with human approval, with an 80-case evaluation set.
- 317 domain tests and 595 integration tests; load test of 60 bookings with a median 0.85 s to the next offer.

DAW, Distributed Agentic Workspace (own internal tool, private beta in daily use)

- Designed and built, as sole author, a self-hosted control plane that turns several PCs and a Mac mini into a private worker cluster for jobs and AI coding agents, reachable only over Tailscale.
- Runs Claude Code and Codex coding agents with plan review, human approval gates and retry-with-feedback; local LLM gateway (Ollama) with OpenAI-compatible endpoints.
- 4 machines enrolled and running jobs; 372 tests; unattended recovery after reboot and power loss.
- Fastify API and Next.js dashboard with sessions, CSRF protection, per-workspace roles and append-only audit.

SKILLS

Languages: TypeScript, JavaScript, Python, SQL, Go

Frontend: React, Next.js (App Router), Tailwind CSS

Backend: Node.js, Fastify, Express, Flask, REST / JSON APIs, webhooks

Databases: PostgreSQL, Supabase, MongoDB, Firebase / Firestore, Redis, pgvector

ORM / Data: Drizzle, Prisma, SQLAlchemy

Queues and jobs: BullMQ, Postgres-backed job queues, transactional outbox

AI: LLM APIs (OpenAI, Gemini, Claude via OpenRouter), AI agents with permission-checked tools, evaluation sets, Ollama

Mobile: Flutter, Firebase Messaging

Integrations: Meta Messenger, Instagram and WhatsApp APIs, Meta Conversions API, TikTok Events API, Stripe, WooCommerce, Bangladeshi couriers (Steadfast, Pathao, RedX)

Testing: Vitest, Playwright, integration tests on real PostgreSQL

Tooling & Infra: Git, GitHub Actions CI, Docker, Cloudflare Workers, R2 and Hyperdrive, Tailscale

Cloud: Google Cloud (containers, managed databases, queues)

EDUCATION

- Diploma in Refrigeration and Air-Conditioning Technology, Gopalganj Polytechnic Institute, Gopalganj (completed)
- Studies in Mechanical Engineering, International University of Business Agriculture and Technology (IUBAT), Dhaka (4 years; not completed)

CERTIFICATIONS AND LANGUAGES

- English (Fluent)
- Bengali (Native)
- Hindi (Conversational)
- Urdu (Conversational)
